PREFACE

IN May 1907 the Trustees of the British Museum decided, in view of the celebration of the bicentenary of the birth of Linnæus, to publish a catalogue of the works of Linnæus in the British Museum, Bloomsbury, and the British Museum (Natural History). This was prepared by the late Mr. B. B. Woodward and the late Mr. W. R. Wilson, I.S.O., and appeared as a quarto volume of 27 pages with some 580 entries.

The present revised and enlarged second edition has been compiled by the late Mr. B. H. Soulsby, M.A., formerly Assistant Keeper in charge of the Library of the British Museum (Natural History) from 1921 to 1930. The compiler had seen the whole of the text of the Catalogue through the press, but his death in January 1933 prevented him from passing the Addenda and Corrigenda in their revised form and from publishing an Index to the work.

H.R.H. the Crown Prince of Sweden on several occasions has shown his gracious interest in the Catalogue. At the Royal University of Uppsala the Chief Librarian, Dr. J. M. Hulth, from 1923 until his death in 1928 gave the compiler unrestricted access to the unique collection of the University Library, and Dr. Hulth's unrivalled bibliographical knowledge of Linnæus was always forthcoming when required. His successor, Dr. A. W. Grape, has taken an equally kindly interest in the compilation of the Catalogue, as have also Dr. O. Walde, Dr. A. H. Uggla, and other members of the Staff of the same Library. Dr. E. J. Ljunggren, the Chief Librarian of the University of Lund, honoured the compiler with the same facilities, and his successor, Dr. P. Wilner, was good enough to read proofs for him. Both those Libraries have enriched the collection of the Museum Library with gifts of Linnæan Dissertations, Programmata, &c. Without the generous support of these two great Swedish Universities it would have scarcely been possible to present a second edition of this Catalogue with so comparatively few lacunae. Valuable assistance was also rendered by the University Libraries of Basel and Copenhagen, by the Zentralbibliothek at Zürich, the Bibliothèque Nationale, Paris, the Library of the Muséum National d'Histoire Naturelle, Paris, the Stadsbibliotek, Göteborg, the Kungliga Svenska Vetenskaps-Akademien, and by many others.

For bibliographical details the compiler was greatly indebted to the unfailing courtesy and wide knowledge of Dr. C. Davies Sherborn, and for assistance in the Botanical Section of the work to Mr. J. Ardagh of the Department of Botany of the British Museum (Natural History). Valuable assistance in proof-reading has been given throughout the whole work by Mr. G. O. Adelborg, of the firm of Messrs. Björek and Börjesson of Stockholm, while Mrs. Ingegerd Beskow, née Tullberg, and Dr. E. Lindell, Växiö, have helped with the correction of the list of Linnæan portraits in Sect. XIV A.

The Index to the works of Linnæus has been prepared by Dr. C. Davies Sherborn, and Dr. A. H. Uggla of Uppsala has given great assistance in this as in other matters connected with the Catalogue.

Mr. A. C. Townsend, who succeeded Mr. Soulsby as Librarian, has written the Introduction, in which the general plan of the Catalogue is briefly explained.

Mr. Soulsby claimed that the collection of Linnæana at South Kensington was the 'next best in the world' to that at Uppsala, and if this be so, it is due entirely to his great generosity—he spent nearly one thousand pounds on books for the Natural History Library—and to his indefatigable zeal in searching for desiderata. During the compilation of the Catalogue he used to go every summer to Scandinavian or Continental libraries, and nearly always returned with some bibliographical rarity. It is indeed much to be regretted that he did not live to see the publication of this work, termed in his obituary notice in the *Svenska Dagbladet*, 'the most complete review of the writings of or on Linnæus which exists'.

Director.

INTRODUCTION

THIS Work is that section of the 'Catalogue of the Books, Manuscripts, Maps and Drawings in the British Museum (Natural History)' which relates to Linnæus, with the titles of additional items in the Department of Printed Books at the British Museum, Bloomsbury.

The cross-references refer to entries in the Catalogue of the Library of the British Museum (Natural History) in five volumes, 1903–15, and two supplementary volumes, vol. vi, 1922, and vol. vii, 1933.

Attention is drawn to the abbreviated form of the titles of the works and dissertations of Linnæus, which are given as catchwords in heavy type at the head of the first entry for each work. All the entries are numbered to facilitate reference.

As will be seen from the Arrangement of Headings on page 1, this Linnæan Catalogue is divided into twenty sections, and it should be noted that the arrangement in each section is chronological throughout. Translations, adaptations, facsimiles, and indices follow in chronological order the editions of the original work to which they refer. Thus, Junk's facsimile edition, 1907 [No. 481], of *Species Plantarum* follows the entry relating to the first edition of that work, 1753 [No. 480], and appears before all entries relating to the second edition, 1762–63 [No. 500].

I. Works.—MSS. Works. Nos. 1–29a.

The first part of this section contains entries relating to articles on Linnæan MSS., and the second part lists collected editions of two or more of Linnæus's works whether as originals, translations, or reprints.

IA. Works.—Appendix. Nos. 30–33.

To six of the sections [*viz.* Nos. I, II, III, IV, VI, and X] there is an appendix containing titles of critical, descriptive, and other works relating to or founded upon the works of Linnæus given in the section in question. Thus, in Section IA are included Pulteney's *General View of the Writings of Linnæus*, 1781 [No. 33a], and also Vandelli's *Diccionario dos termos technicos de historia natural extrahidos das obras de Linnéo*, 1788 [No. 34], as being works referring to Linnæus's writings in general.

II. Systema Naturæ. Nos. 39–142.

This section is subdivided into sections A and B, the former relating to editions I–XII of the *Systema Naturæ*, 1735–68, as recognized by Linnæus himself, and the latter to edition XIII and to works relating to editions I–XIII. Chronological arrangement is observed throughout, indices being placed directly after the edition of the *Systema* to which they refer.

IIA. Systema Naturæ.—Appendix. Nos. 143–182b.

This contains titles of works relating to or founded upon the *Systema Naturæ* and the Linnæan System in general.

III. Travels. Nos. 183–223. IIIA.—Appendix. Nos. 224–227b.

This section contains Linnæus's accounts of his journeys undertaken for purposes of scientific observation. Commentaries, translations, and critical writings follow the original work. In the appendix are found general works on Linnæus as a traveller.

IV. Botanical Works. Nos. 228–620a. V.—Appendix. Nos. 621–919c.

Here are Linnæus's botanical writings, arranged on the same chronological principle as the titles in the preceding sections. The appendix gives a list of works founded upon or otherwise related to the botanical works of Linnæus.

VI. Medical Works. Nos. 920–89. **VIA.—Appendix.** Nos. 990–1011a.

This section is arranged on the same plan as Section IV, and the appendix contains general works and papers on Linnæus's career as a physician.

VII. Mineralogical and Geological Works. Nos. 1012–25a. **VIIA.—Appendix.** Nos. 1025b–1035.

This section and its appendix are arranged on the same principle as Sections IV and VI.

VIII. Miscellaneous Works. Nos. 1036–80.

Here are found writings of Linnæus which cannot conveniently be classified in any other section, as, for example, a book, the subject-matter of which has an economic interest [No. 1043], or such a work as *Nemesis Divina*, 1848 [No. 1060].

IX. Museological Works. Nos. 1081–1100.

Entries relating to the catalogues drawn up by Linnæus of the Museum Tessinianum, 1753, the Museum Adolphi Friderici, 1754, and the Museum Ludovicæ Ulricæ, 1764.

X. Zoological Works. Nos. 1101–1218. **XI.—Appendix.** Nos. 1218a–1271f.

This section and its appendix are arranged on the same principle as the botanical sections IV and V.

XII. Theses and Orations. Nos. 1272–2460a.

This section is divided into two parts, the first [Nos. 1272–1331] being an account of the collected editions of the dissertations known under the general title of *Amœnitates Academicæ*, and the second [Nos. 1332–2460a], a catalogue of the original separate editions. The first part (Collections) is also subdivided into two parts. In the first [Nos. 1272–8] will be found some general notes on the *Amœnitates Academicæ* and a list of the sets of the *Amœnitates* in the library of the British Museum (Natural History). The second subdivision [Nos. 1279–1331] gives an analytical account of these sets.

XIII. Letters. Nos. 2461–2568c.

Collections and selections come first [Nos. 2461–2491b], followed by a catalogue of individual letters and correspondence with particular individuals [Nos. 2492–2568c]. Autographs come first and the rest follow in chronological order of their publication.

XIV. Life. Nos. 2568d–3120.

This gives in chronological order of publication those works entirely devoted to or containing an account of Linnæus's life.

XIVA. Portraits. Nos. 3121–3430.

This section is divided into three parts. The first part [Nos. 3121–3380] is a chronological list of portraits, medallion-portraits, busts, and statues of Linnæus, whether appearing separately or as illustrations in books. The second part [Nos. 3381–3417] is a catalogue of medals of Linnæan interest, and the third [Nos. 3418–3430] is a list of undated portraits.

XV. Herbarium and Collections. Nos. 3431–3536.

Works relating to Linnæus's natural history collections and to specimens therein.

XVI. Lectures. Nos. 3537–62.

This is divided into two parts, the first [Nos. 3537–45] describing manuscripts of Linnæus's professorial writings, and the second [Nos. 3546–62] cataloguing reprints or critical works.

XVII. Works edited by Linnæus. Nos. 3563–3604.

This includes Artedi's *Ichthyologia*, 1738 [No. 3563], and Hasselquist's *Iter Palæstinum*, 1757 [No. 3577]. In this section are also found works to which Linnæus contributed either a preface or with which he was in some way connected.

XVIII. Works written with the co-operation of Linnæus. Nos. 3605–3612.

Here are such works as Gronovius's *Flora Virginica*, 1737–43 [No. 3605], in which Linnæus definitely collaborated with the author.

XIX. Bibliography. Nos. 3613–3725.

Bibliographies of Linnæus, in chronological order of publication, from 1740 down to the present day.

XX. Miscellaneous. Nos. 3726–3741.

Items of Linnæan interest, possessing a literary rather than a scientific significance, as, for instance, *Monachologia*, 1783 [No. 3727].

The Catalogue concludes with an Appendix Nos. [3742–3874] in eight divisions, comprising (1) a list of Societies, Periodicals, Gardens, Islands, and Towns named after Linnæus, and works relating to (2) the Family of Linnæus, (3) Carolus Linnæus (1778–1806), Nephew, (4) Elisabet Christina Linnæa (1743–82), Daughter, (5) Lovisa von Linné (1749–1839), Daughter, (6) Nils Linnæus (1674–1748), Father, (7) Samuel Linnæus (1718–97), Brother, (8) Carl von Linné, the Younger (1741–83), Son.

Attention is drawn to the Addenda and Corrigenda, numbered and arranged according to the sections of the main part of the catalogue to which they refer, and also to the Index to the works and dissertations of Linnæus which are given in the same abbreviated form as appears in heavy type at the head of the first entry for each work in the main part of the catalogue.

fol. *Generalstabens Litografiska Anstalt: Holmiæ, 1907.*

In the Prefatio is reproduced the Letter of Dec. 19, 1735, from J. F. Gronovius & Isaac Lawson to Sir Hans Sloane.

With a Portrait: Carolus Linnæus in his Lapland Dress. *Hoffman pinxt. H. Kingsbury sculpt. Publish'd April 6, 1795 by H. Kingsbury No. 4 Warren Street, Fitzroy Square.*

The *Systema* is followed by the *Methodus*, 1736.

In Voltaire's copy of the *Systema Naturæ*, in the former Russian Imperial Library at St. Petersburg, is the famous sentence on the flyleaf, in Voltaire's own handwriting:

SI DIEU N'EXISTAIT PAS—IL FAUDRAIT L'INVENTER.

Question 1. Whether the 10th or 12th edition of Linnæus [*Systema Naturæ*, 1758–59, or 1766–68] shall be taken as the basis of Zoological Nomenclature?
Question 2. Is it necessary to add any other Pre-Linnæan author's names to the list of those whose works were accepted by the Committee of the British Association?

Gray's interleaved copy of the *Systema Naturæ*, 1758–59, was bequeathed by him to William Mason [1724–97], and passed to Richard Stonehewer [1728–1809], and was eventually sold at the Bright Sale in 1845. John Ruskin [1819–1900], a later owner, left the book to his cousin & heir, Mrs. Arthur Severn, who presented it to Charles Eliot Norton [1827–1908], by whom it was presented to Harvard University Library.

Among the Birds, nearly all the species additional to Gmelin appear to be quoted from John Latham's *Index Ornithologicus*. 2 vol. 1790. Among the Mammalia, the new Species described in Thomas Pennant's *History of Quadrupeds*, 2 vol., 1781, and in Arthur Phillip's *Voyage to Botany Bay*, 1789, have received Latin names, thus forestalling those in George Shaw's *General Zoology*, 14 vol., 1800–26, hitherto looked upon as the first Latin binomial names of those Species.

more complete by the addition of Vaillant's beautiful Birds of Africa; the superb Fish of Mark Eliezer Bloch; the Amphibious Animals, Reptiles, Insects, &c., in the costly works of Albertus Seba, Merian, Fabricius, Knorr, &c.; the elegant improvements of the *Compte de Buffon*, and the more modern Discoveries of the British Navigators in the South Pacific Ocean, New Holland, New South Wales, China, Cochin-China, &c. 8°. Printed for the Proprietor: London, [1794-1810.]

Engraved title to Vol. 1 reads: Magazine of Natural History. Wanting some of the plates. Vol. 5 is of the third edition, and bears date 1813, whilst Vol. 2 seems to be of the second edition (See note to "Directions to the Binder").

The extreme dates cited on the plates range from 1 June 1794 (in Vol. 10), to 14 Aug. 1809 (Vol. 12). The work appears to have been issued in 198 (monthly) numbers, and was originally intended to form fifteen volumes ("Address," p. iii), but the section on Mineralogy was eventually combined with Botany, to form Vol. 14.

According to Hulth (I. 14. 1907) the portrait by Chapman of Linnæus, dated Oct. 16, 1802, which forms the frontispiece in this set, was issued with Vol. 9, and was coloured. Hulth's statement, that the first seven volumes had no connexion with Linné's work, is incorrect.

Vol. 7 is entitled: An Universal System of Natural History, including the Natural History of Man, the Orang-Outang; and whole tribe of Simia, all the known Quadrupeds, Birds, Fishes, and Amphibious Animals; Insects, Polypées, Zoophytes, & Animalculæ; Trees, Shrubs, Plants, and Flowers; Fossils, Minerals, Stones, and Petrifications forming a magnificent view of the three Kingdoms of Nature, divided into distinct parts, the characters separately described, and systematically arranged.

- 296 History of the name *Linnæa*. Examples of the use of the generic name *Linnæa* by Linnæus himself several years before it was published in his "Genera."

I. "Spolia botanica," a MS. written in 1729; on the first page *Linnæa* has been written, but partially erased, and his patron's name, *Rudbeckia*, substituted.

Originally published by Dr. E. Ähring, but independently discovered again some years afterward.

II. MS. "Iter lapponicum;" record of 29th May, 1732, o.s. [9th June, n.s., when specimens were gathered at Tugganforsen]. Published by Sir J. E. Smith (1811), Dr. [J. E. E.] Ähring (1889), and Prof. T. M. Fries (1913).

III. "Genera plantarum;" p. 188 (1737) nominally by J. F. Gronovius, but drawn up in Linnæus's style, and not that of Gronovius.

IV. Block from a photograph of the actual specimen given by Linnæus to Gronovius, to justify the publication; from Prof. T. M. Fries; the original specimen is in the Botanical Department of the British Museum (Natural History).

Amstelædami, 1737.

Title-page printed in red and black.

With engraved frontispiece.

With the book-plate and MS. notes of Sir Joseph Banks, Bart.

The Prefatory pages contain:

1. Verklaaring van de Tytelprint.

2. Dedication by Linnæus to Dr. Georgius Clifford, giving names of other famous Herbaria.

3. Lectori Botanico. 1737. Jul. 30.

4. Bibliotheca Botanica Cliffortiana.

5. Authores usitati.

6. Methodus Plantarum in Horto Cliffortiano.

7. Genera Foliorum.

The frontispiece & the 35 plates were engraved by G. D. Ehret & J. Wandelaar. The text was partly printed in quarto, but, owing to the size of the plates, had to be reprinted in folio, which accounts for the pagination.

p. 231. Note by LINNÆUS: "Observet Lector hanc paginam excipi a pagina 301., nullo tamen hiatus admissio, præter numerum paginarum nobis ob typum necessarium."

In 1917 Ernst Philipson, Swedish Consul General at Amsterdam, presented to Upsala University Library Clifford's Edition de Luxe of this work, printed on Fine Paper. The title page is all in gold letters, and the first 27 pages have the capital letters in gold. The frontispiece and the portrait of Linnæus by P. Tanjé, are also ornamented in gold.

On p. 362 of this and also of the preceding edition is a second imprint: Stockholmiae, Typis Laur. Ludw. Grefingii.

Dedicated to Count A. J. von HÖPKEN. The portrait of Carl Linnæus is engraved by J. M. Bernigeroth, Lips., 1749, & also appeared in the 7th edition of his *Systema Naturæ*, Lipsiæ, 1748.

Plates X & XI in this and the two following editions are worked in as illustrations in the text. Pagination as in no. 437.

This work is an elaboration of the *Fundamenta Botanica* (1736), with a few inclusions from the *Oratio de Telluris Habitabilis incremento* (1744) and the *Sponsalia Plantarum* (1746).

Its substance formed the subject of Linnæus's botanical lectures for 1746-48, as shown by Montin's transcripts of those lectures, Banksian MSS., No. 72 and 73, q.v. infra : [XVI.—Lectures. 1746 & 1748.—3352 & 3354.]

Linnæi . . . *Species Plantarum*, &c. [1753. A review.
By W. W.] See GENTLEMAN'S MAGAZINE. The Gentleman's Magazine . . . By Sylvanus Urban, Gent. Vol. 24. pp. 555-558. Dec. 1754. 8°. 1754.

[1755.]

"In our Mag. Vol. xxiv. p. 555, we published some 480c
observations upon the last work of Professor Linnæus intitled, *Species Plantarum*, and on his General System of Botany, which were communicated to us by a Naturalist of great eminence here. The Professor having seen this number of our work in Sweden, thought fit to transmit the following reply, which we publish in his own words, that it might not suffer by an English translation : 'In actis periodicis anni præteriti vidi recensionem *Specierum*,' &c. See op. cit. Vol. 25. pp. 317-318. July 1755. 8°. 1755.

"This Gentleman, who is now resident at Upsal, has lately received an offer from the king of Spain of an annual pension of 2000 pistoles for life, letters of nobility, and the free exercise of his religion, if he will remove and exercise his function, as a naturalist, at Madrid. Whether he will accept this offer is not known."

- 621 Joannis Martyn Historia Plantarum Rariorum. (Centuria I. Decas 1-5.†) See ROYAL SOCIETY OF LONDON. fol. 1728[-1737].

The Preface is dated: Dabam Londini, Martii 25^o. 1728.
The Index is printed on the verso of the last page of the Preface: Index Linnæanus. [With a footnote:] Cum tabulæ careant numeris, cel. Linnæus citat paginas hujusce operis.
The last Decade (no. 5) was issued in 1737, but in either case this seems to be the first English Botanical work to give a Linnæan Index. This state of Dec. 1 appears to be unique.

For my part I do not know a greater proficient in the knowledge of plants, particularly their culture, nor so warm a friend of your's: for he always toasts your health, as the *King of Botany*, by the name of my *Lord Linnæus*; and that before he drinks the King's health. - 1218c § Proposals for publishing one hundred Prints exhibiting a curious collection of Plants and Insects. By John Miller . . . The Plants will be classed under their proper genera according to the Botanical System of Mr. [Philip] Miller of Chelsea . . . The Insects will be ranged, as by Dr. Linnæus in his *Systema Nature*, under their proper classes together with the names by which they are known in several parts of England . . . N.B. With the second number will be given a translation of Dr. Linnæus's Vth-Class of his *Systema Nature* divided into VII sections for the better explanation of the Plates as they are published, with the names of the most authentick authors, who have treated upon the subjects in hand . . . If the Proprietor meets with encouragement in this undertaking, he proposes to go through the whole Animal Creation, according to the System adopted by Dr. Linnæus. [Plates I–X with Text.] See MUELLER (JOHANN SEBASTIAN) afterwards MILLER (JOHN) fol. 1759–60.

To be published in 50 numbers, one every month, and after Midsummer 1759 two every month. Each number to have two folio copper plate prints, 17"×11", with a half sheet of Letter Press. Price 5s. each number to Subscribers. The first number to be published 10th May 1759. Class V. Animalcula polyous, &c.

For no. 186 Carl von Linné, the Younger, acted as Præses in place of his father, November 20, 1776.

Volume 1 contains an Alphabetical Index to the Respondentes and to the Titles of the 186 Dissertations.

Each volume contains also an Alphabetical Index to the Respondentes and to the Titles of the Dissertations in that volume.

This set is in the General Library of the BRITISH MUSEUM (NATURAL HISTORY), which possesses original copies of all the 186 Dissertations, with the exception of no. 1, 2, 10, 50, 142, 157, 160, & 161.

These numbers are replaced by Photostat copies from the set in Sir Joseph Banks's Library in the BRITISH MUSEUM (BLOOMSBURY), with the exception of 160, of which the Royal University Library at Upsala has provided a Photostat copy from the apparently unique copy in that University.]

The first fundamental treatise on the principles of Linnæus published
in England, and the era of the establishment of Linnæan Botany
in England. Benjamin Stillingfleet [1702-71] is remembered now as
the original (or originator) of the word "blue-stocking." "Dr. Bisset
(in his *Life of Burke*) traces it idly to a sobriquet imposed by Mrs.
[Elizabeth] Montagu, and the literary ladies of her circle, upon a
certain obscure Dr. Stillingfleet, who was the sole masculine assistant
at their literary sittings in Portman Square, and chose, upon some
inexplicable craze, to wear blue stockings." Thomas DE QUINCEY.

4^o. *Sumtibus Josephi Mauriti Lechner ; Typis Hæredum Widmanstadii : Græcii, 1764.*

The text in the three Graz editions (1764, 1766, and 1769) is mainly based on the text of the *Amœnitates Academicæ* (1749–63), but the editor has omitted passages relating to the sexes of plants and animals "Pauca . . . verba, rarius sententias, suppressi, quos magni Lectorum parti offendiculo fore existimabam."

Cf. infra : [XII.—Theses, &c.—1776–78.—1329.] *Des Ritters Carl von Linné Auserlesene Abhandlungen, &c.* [Edited and translated by E. J. T. Hoepfner.] Bd. 1. Vorrede. p. ii. Leipzig, 1776.

Some of the additional notes in the Graz editions are by Nicolaus Poda.

An historical description of the University Botanic Garden, Upsala
(different from the work of the same name, 1748, q. v. supra: [IV.—
Botanical Works.—1748.—428.]) founded in 1657 by King Carl
Gustav, with the aid of Olof Rudbeck the Elder.
Pages 6–16 contain the lives of Olof Rudbeck, the Elder [1630–1702],
and Olof Rudbeck, the Younger [1660–1740].
It is here noted that Padua has the first Botanical Garden, founded
in Europe, 1540; Pisa & Bologna, 1547; Paris, 1570, Leyden, 1577;
Leipzig, 1580; Montpellier, 1598; Jena, 1629 & Berlin, in 1714.
Linnæus also refers (p. 23. "Thermometrum nostrum est 0 in puncto
congelationis & numerat 100 ad gradus aquæ coquentis") to his
Centigrade Thermometer, 0° Freezing to 100° Boiling, whereas
Anders Celsius [1701–44] made his 0° Boiling to 100° Freezing. In
June 1744 Linnæus has a Centigrade Thermometer made to his
order by Daniel Ekström in Stockholm, but this was broken on its
way to Upsala. The cost was 5 plåtar (15s.). He received a new one
in November 1744. Linnæus's Centigrade Thermometer is now in
use in all scientific calculations throughout the entire world.

A commentary on the *Herbarium Amboinense*, 1741–55, of Georg Eberhard Rumpf [1627–1702], which has been described as one of the greatest and most magnificent botanical treasures of the world. Rumpf was Consul under the Dutch East India Company in Amboina for nearly half a century. The MS. was 30 years in the possession of the Company till it was rescued from oblivion by Joannes Burmannus, 1741–55.

By the foresight of Count Carl Gustav Tessin, and of Magnus de Lagerström, an order was made that a naturalist be attached to each vessel of the Swedish East India Company, which facilitated the discoveries of Pehr Osbeck [1723–1805], Christopher Tårnström [1703–1746], and Olof Torén [d. 1753]. Lagerström procured for Upsala University a valuable Chinese collection of specimens, including the medicinal plants found in apothecaries' shops in China, and a Chinese Herbal in 36 volumes, 2 being plates.

The carved Rhinoceros Horn, presented by Magnus de Lagerström to Linnæus, was presented by Lady (Pleasance) Smith to the Linnean Society of London May 24, 1869. *Cf. Proc. Linn. Soc. Lond.* Sess. 1868–69, p. cxxix. 1869.

 The full discovery of the shrub, which produces Balm of Gilead is due to Pehr Forskål [1736—1763], a pupil of Linnæus, who went to Arabia Felix on the expedition planned by Johann David Michaelis [1717—91.] which did so much honour to King Frederick V of Denmark. Forskål found the shrub near Medina, and sent a branch to Linnæus, who named it *Forskalea*.
 It is figured in Leonard PLUKENET: *Almagestum Botanicum*, pl. 275. fig. 5. Londini, 1696.

S. pl. 2.
 Car. a Linné

Schedulam quam in gratiam auditorum, jussu
 nobilissimi a Rosenstem edidi, inclusam mitto,
 imprimis cum immortale tuum nomen huic
 prefixi, ut Tyrones scirent quos principes agno-
 scerent. Pergratum mihi erit si pars prior
 tibi non displiceat, quam vero sit difficile
 in posteriore quidquam solidi prestare me
 melius novisti, qua tamen mihi visa dixi,
 at ex hoc opusculo lauream non quaero.
 Communis noster amicus D. a Rosenstein
 per tres circiter menses dira Hereditaria
 afflictus fuit, nec dum in vado est; Te-
 una meum plurimum valere jubet.

Sir

Some months ago came to this City Dr. Carolus Linnæus from Sweden, a person very well known by his knowledge in Natural History; for which reason he was sent by the Societas Regia Upsaliensis to Lapland, where he hath discovered severall things not before known, which possibly are long will be published. He was so kind to communicate to us his *Systema Naturæ*, which we sent to the press at our own expence, with an intention only to have a few Copies; but at the request of several friends we were determined to communicate it fully (judging it might be agreeable) to the Learned world. Wherefore we take the Liberty to present You a Copy, & request You will also make the other acceptable to the Royal Society, of which You are deservedly president. We are

Sir

Your most Obediant & Humble servants.

With the bookplates of James BINDLEY, M.A., F.S.A., [1737-1818], &
of Basil H. SOULSBY, F.L.S.
The red morocco binding, with gold tooling and dark blue end-papers
is exactly similar to the B.M. copy (647.1.7), purchased October 20,
1838.
This poem, printed at Augsburg on Fine Paper in a very limited
edition of 10 copies, with 22 engraved plates, describes the home &
work of Linnæus.
The dedication reads: Linneo optimo sapienti sagaci totius Europæ
oraculo, ornamento Regni Suecici viro nobilissimo Fridericus de
Baltimore . . . D.D.D.
There are 3 copies of this work in the BRITISH MUSEUM (Bloomsbury),
of which the Grenville copy has in gold letters on the front cover:
Perillustri ac splendidissimæ Universitatì Upsaliensi hunc Libellum
consecravit Fr. de Baltimore.

[XIV.—LIFE.—1770.] (*contd.*)

This copy apparently did not reach its destination, and the Royal University of Upsala has recently purchased a copy to replace the other.

The work contains also :
Epistola urbanitatis causa scripta inter F*. B. et C*. L*. ad originem hujus operis spectantes. 1769–70. pp. xxxiv–xlvii.

11 Letters between Lord Baltimore & Linnæus, dated 1769–70.

Plate XIII is entitled :

Linnæus brought forth Nature from obscurity.

The Bindley copy has 21 plates.

The Grenville copy (G. 18291) has 22 plates.

The B.M. copy (647.1.7) has 21 plates.

The B.M. copy (647.1.8) has 14 plates.

The Grenville copy has an additional plate, *Palatium Regale Hafniæ*, opposite p. i, but does not contain the double plate of (?) Moscow, found in the other 3 copies, opposite p. xviii.

The double plate of *The Flying Mountains* (*Montagnes russes*), opposite p. xxv, is probably the first engraving of a Switch-back Railway.

There are 4 variations in text in these 4 copies.

1. p. xvii. line 191. In the Bindley copy and in the B.M. copy (647.1.7.) *camoenis* has been erased, and *flagellum* substituted in ink.

2. p. xxiv. line 22. In the Bindley copy *advenit* replaces the *nunc venit* of the other 3 copies.

3. p. xxiv. line 25. In the Bindley copy *tetra Cupido* replaces *vincta Cupido* of the other 3 copies.

4. p. xxv*. line 70. In the Bindley copy *Mox quoque* replaces *hic dum* of the other 3 copies.

The Royal University Library, Upsala, also possesses two variants (one from the Library of J. H. Lidén), without the Letters, in which the *Venatio Livonica* has, respectively, 74 & 96 lines.

Cf. infra: [XIV.—LIFE.—1930.—3106.] Linné und Berlin. Von Felix Bryk. pp. 46–48, where it is erroneously stated that only 2 copies of the *Gaudia Poetica* were printed. Cf. also *Nature* (London). October 4, 1930. Supplement. pp. 521–2.

“Och Sveriges konung, Gustaf III, hvilken genast vid 2593b
första underrättelsen om Linnés allvarliga insjuknande (1776) genom ett egenhändigt bref till honom visat sitt deltagande, gjorde sig efter dödsfallet till tolk för hela nationens känslor genom den vackra medalj, som han med anledning däraf lät prägla, och ännu mera genom att i trontalet till Rikets ständer i oktober 1778 särskildt omtala Linnés fränfalle med de orden: ‘Jag har förlorat en Man, som gjordt lika ära åt sitt Fosterland såsom värdig Medborgare, som han verkligen var öfver hela världen berömd. Länge skall Upsala påminna sig den ryktbarhet, som Linnés namn åt denna Hög-schola förvärfvat.’” See FRIES (TH. M.) Linné. *Lefnadsteckning*, &c. Del. 2. p. 411. 8°. 1903.

LINNÆUS appears to be the only man of science whose death and services to his country were recorded by any European Sovereign in the Speech from the Throne.

[1834.]

[King Gustavus III, in his Speech from the Throne, at 2593c
Stockholm, 1778, referred thus to Linnæus: “The University of Upsal has also attracted my attention. I shall always remember with pleasure that the chancellorship of that university was intrusted to me before I ascended the throne. I have instituted in it a new professorship; but, alas! I have lost a man, whose renown filled the world, and whom his country will ever be proud to reckon among her children. Long will Upsal remember the celebrity which it acquired by the name of LINNÆUS.”

The King of Sweden also had a Medal struck in 1778 in honour of Linnæus, which is reproduced on the Title-page of this Catalogue.]

- The Diary of Linnæus. Written by himself, and now translated into English [by Carl Troilius] from the Swedish Manuscript in the possession of the editor [W. G. Maton, *F.R.S.*]. See PULTENEY (RICHARD) *F.R.S.* A General View of the Writings of Linnæus . . . Second edition . . . by W. G. Maton, &c. pp. 507-578. 4°. 1805.

The Swedish MS., consisting of 80 folio pages, was sent in 1770 by Linnæus to Dr. C. F. Mennander, Archbishop of Upsala, who commenced a translation into Latin. In 1779 Mr. Fredenheim, son of the Archbishop conveyed the Diary and other MSS. to Robert Gordon, of Cadiz, to be printed in England. Mr. Gordon died soon after, and the MSS. were sold by his executors to J. Mawman, the publisher of the second edition of *The General View, &c.* In this copy are inserted MS. copies, transcribed about 1790, of 5 Letters from Linnæus to Archbishop C. F. Mennander:

- (1) Translated into English, dated 1734.
- (2) do. do. Feb. 1, 1737.
- (3) do. do. Nov. 30, 1739.
- (4) in Swedish, Jan. 22, 1770.
- (5) in Latin, 1776.

- 2771 * Am 11 Januar 1878 wurde zur Erinnerung an den vor 100 Jahren verstorbenen grossen Naturforscher Karl v. Linné eine sehr zahlreich besuchte Festversammlung abgehalten. Der Vorsitzende, Professor Zeiss, schilderte in gedrängter Kürze die geringen Fortschritte in der Botanik vor Linné, ging dann auf die Lebensschicksale dieses Naturforschers über und zeigte, dass seine Leistungen den Impuls zu dem raschen Aufblühen der Botanik gegeben, dass sein künstliches System auch nach dem Auftreten der natürlichen seine Bedeutung behaupten müsse. (Der stenographirte Bericht wurde in der stenographischen Monatsschrift aus Landshut abgedruckt.) Herr Regierungspräsident v. Lipowsky betonte hierauf in längerer Rede die grossen Schwierigkeiten, mit welchen der lange verkannte und angefeindete Linné zu kämpfen hatte, bis er allseitig anerkannt wurde. "So slavish was then the submission to the Linnæan method, that we read of Dr. George Shaw (1751–1813), Vice-President of the Linnean Society and Keeper of Natural History in the British Museum, being found going through the collection of shells with a small hammer to break all that did not fit the diagnoses of Linnæus. When, too, John Edward Grey [*i. e.* Gray] (1800–1875) stood for election to the Linnean Society, after the publication of his father's *Natural Arrangement of British Plants* (1821), which was understood to be his work, he was blackballed!"

Publiée, avec un album de 10 planches phototypiques par le Docteur E.-T. Hamy, &c. obl. fol. [1893.]
The original paintings are in the Hippolyte Destailleur Collection of *Dessins sur Paris*, Bibliothèque Nationale, Paris.
The original plaster bust, erected on August 23, 1790, was to have been replaced by a bronze bust, "to make the representation of Linnæus as imperishable as his memory and his works." But in 1794 it was destroyed by illiterate *sansculottes*, who in their blind fury mistook CHARLES LINNÆUS for CHARLES IX, who had planned the Massacre of St. Bartholomew on August 24, 1572. Nadault de Buffon, editor of Buffon's Correspondence, protests (1860) against the "promenades bruyantes sous les beaux ombrages du Jardin du Roi dans lesquelles le buste de Linnée était porté en triomphe et où on ne craignait pas d'outrager la mémoire de Buffon dans ces lieux même embellis par ses travaux et illustrés par son génie."

The Linnæan Isles are shown on the author's Chart, p. 182: "Draft
of Lands north^d of Frow Islands in Davis's Strait, made by observa-
tion, 1817."

The author "presumed to give them the name of the Linnæan Isles,
in honour of the prince of natural historians."

According to the *London Quarterly Review* (Vol. 19, pp. 208-214) this
is "one of the most bare-faced attempts at imposition. . . . The very
small portion of his Greenland which is not absolute nonsense is
either fiction or downright falsehood."

On p. 3 is an engraving of the younger Linné's coat of arms, which was broken in pieces, according to the Swedish custom, at his funeral in Upsala Cathedral on November 30, 1783, as the male branch of the ennobled family of Linnaeus had then become extinct.
In the anonymous *Vita Caroli a Linné (Nova Acta Regiæ Societatis Scientiarum Upsaliensis*. Vol. 5. p. 344. 1792), there is a curious mistake as to the death of the younger Linné: *Supervixerat enim parenti non ultra triennium, cum Upsaliæ anno 1781 & simul cum illo Linnæanum nomen in vivis esse desit.*

" . . . Genera Linnæana plerumque retinui, non ideo, quod a magno viro constructa fuerint, hæc enim est fides carbonaria, veritatis hostis, scientiarum pestis, sed quia ipsemet comperi ex propriis observatis ea esse verissima. Fateor tamen, in dubiis rebus LINNÆO fidem sæpius adhibui, & cur non credam Viro, quo nemo veros stirpium characteres adspexit propius, nemo majores in Rei Herbariæ gratiam labores inivit, nemo denique mortalium per plurima sæcula, tanta præstitit, quot unus ille Princeps Botanicorum, cujus eximia merita, æternumque nomen grata nunquam non agnosceret Posteritas, nullaque iniqui livoria macula dissipabit." MS. note on the half-title of Part 2: "Oggi 15. Guigno d. a Milady Hamilton in segno d'aver fatta conoscere all'autore Madama Swinburne." Emma, Lady Hamilton [1761–1815] lived at Naples from 1786 to 1798. Mrs. Martha Swinburne, wife of Henry Swinburne, the traveller, was in Naples between 1776 and 1779.

The works of Linnæus were banned by the Roman Catholic Church, and placed on the Index Librorum Prohibitorum in 1758 by Pope Clement XIII [1693–1769], and condemned to be burnt.

It was not till 1773 that the broad-minded Cardinal Zelada succeeded in gaining permission from Pope Clement XIV [1705–1774] for Professor Minasi to discuss the Sexual System of Linnæus in public at Rome.

In 1774 Pope Clement XIV removed from his office the Professor of Botany in the Botanical Garden at Rome, on the grounds of insufficient knowledge of the Linnæan System.
